

Executive Summary: Bahaghari Retail Sales Analysis

This analysis examined sales transactions across Bahaghari Retail's stores in Luzon, Visayas, and Mindanao. The Power BI dashboard revealed several important patterns related to sales performance, product demand, and regional contributions.

Luzon generated the highest total sales revenue, contributing ₱24,138 or approximately 43% of overall sales. Visayas followed with ₱18,657, while Mindanao generated ₱12,915. Although Mindanao recorded the lowest total revenue, it achieved the highest average transaction value at approximately ₱380 per transaction, indicating stronger spending per customer purchase.

Groceries emerged as the dominant product category, accounting for ₱27,364 in sales—nearly half of total revenue. Within this category, Rice 5kg was the best-selling product, generating ₱14,300 in sales. Other strong-performing products included Cooking Oil 1l and Colgate Toothpaste 100ml. This suggests that essential household items remain the primary revenue drivers for the business.

The sales distribution showed a positive skew, with a mean transaction value of ₱278.55 and a median of ₱150. The substantial gap between the mean and median indicates that a small number of high-value transactions significantly increased overall average sales. This finding suggests that while most transactions are relatively modest, premium purchases contribute disproportionately to total revenue.

Bahaghari Retail should strengthen its inventory and promotional focus on high-performing grocery products, particularly rice and cooking oil, while implementing targeted upselling strategies in Luzon and Visayas stores. At the same time, management should study the purchasing behavior in Mindanao to identify factors driving its higher average transaction value and replicate those successful practices across other regions. Doing so can increase overall revenue while maximizing profitability from existing customer demand.
